Mountain Weather Forecast

Yorkshire Dales National Park

Forecast valid from 06:00 on Friday 09 Jun 2023 until 23:59 on Saturday 10 Jun 2023

Forecast Issued on Friday 09 Jun 2023 at 02:46

Confidence: High for early fine and increasingly very warm or hot conditions towards the weekend. Also for a risk of more changeable weather with showers and thunderstorms from Saturday onwards. Moderate for exact timing of cloud clearance each morning. Low confidence in the timing and distribution of showers from this weekend.

Headline for Friday 09 Jun 2023: Morning low cloud clearing to a mostly fine, sunny and warm day. Rather breezy.

Mountain weather hazards on Friday 09 Jun 2023

Blizzards No Likelihood	**Heavy persistent snow** No Likelihood	**Storm force winds** No Likelihood
Gales No Likelihood	**Severe chill effect** No Likelihood	**Poor visibility** Low Likelihood
Thunderstorms No Likelihood	**Heavy persistent rain** No Likelihood	**Strong sunlight** High Likelihood

Forecast for Friday 09 Jun 2023

Weather: Mostly clear in the west, but extensive low cloud affecting eastern hills to start the day. The cloud lifting and clearing by late morning or early afternoon to leave a dry day with prolonged warm, hazy sunshine. Fine and mostly clear during the evening. Fairly breezy on summits and ridges.

Chance of cloud-free hill tops above 600m: 40% in the east at first, 80% elsewhere, becoming 100% for all by late morning. Becoming 60% in the east after dark.

Low Cloud and visibility: Widespread low cloud at first, mainly in the east of the park, with bases 400-500m, tops 500-600m, the highest dales likely remaining above the cloud layer. Patchy cloud further west, with some hills completely clear. Cloud lifting and breaking from mid-late morning, perhaps obscuring some eastern higher slopes for a time. Rather misty in the east early morning, otherwise visibility generally very good. Occasional broken cloud with bases 400-500m affecting some eastern slopes late evening.

Meteorologist's View

High UV levels once again mean that sun protection is essential. Plenty of water is advised. Take care on ridges and summits especially, with some fairly gusty winds at times.

Recent rainfall: measured at Malham: altitude 375m

Forecast for Saturday 10 Jun 2023

Weather: A similar start to Friday morning with overnight low cloud, mainly in the east lifting and breaking during the morning to mostly sunny skies. Becoming very warm or hot and humid. High temperatures may trigger a very isolated evening shower or thunderstorm; this most likely in the west. Rain may be accompanied by gusty winds.

Maximum wind: Easterly 15-20mph, with gusts 25-30mph, perhaps increasing 35mph in or near any heavy showers/thunderstorms.

Chance of cloud-free hill tops above 600m: 60% in the east at first, 80% elsewhere, becoming 95% for all by late morning.

Low Cloud and visibility: Widespread low cloud at first, mainly in the east of the park, with bases 300-400m, tops 500-600m, which means higher slopes are likely to be above the cloud layer. Cloud lifting and breaking by mid-late morning, perhaps briefly obscuring higher slopes. Visibility outside of cloud generally good, though slightly hazy throughout. Locally poor or very poor in any heavy showers or thunderstorms with some temporary ragged cloud perhaps developing above forested areas.

Temperature: **Valleys:** Plus 10 Celsius rising to Plus 24 Celsius
At 600m: Plus 14 Celsius rising to Plus 19 Celsius
Freezing level: Above summits
